Access Efficiency
Trimble® Access™ software lets your team work faster and without disruption by simplifying data-sharing between field and office.

Access Confidence
Tighter collaboration with the office improves quality assurance in the field. Know the data is right before they leave the jobsite.

Access Your Potential
Empower your team with the new, streamlined workflows of Trimble Access. Shorter learning-curves give your business the competitive edge.
All surveying organizations – large or small, private or public – can make meaningful advances in efficiency by enabling a constant flow of information between the field and the office.

- Missing a file?
- Change of plans at the job site?
- A client needs data right away?

Trimble Access software lets you handle whatever challenge comes your way. Simply synchronize the files onto your Trimble controller from wherever you are. Upload files to the office the same way. Any changes made to files, in the field or office, can be automatically updated through Trimble AccessSync™ in real-time.

That means less disruption, less time spent returning to the office, less problem solving over the phone. Instead, you can avoid expensive downtime and put your professional expertise to work where it counts...surveying smarter and completing the job faster.

**Immediate Data Delivery**

With Trimble Access software the handover of data is automatic and seamless, and the numerous benefits equate to one thing…improved efficiency from start to finish.

**In-Field Quality Assurance**

Because data delivery with Trimble Access software takes place as soon as field work is completed, any queries from office staff can be answered while the field crew easily remembers details of the job…even before they have left the work area to assure data quality.

Transfer more than just data: photographs and other supporting information can eliminate guesswork back in the office. Office team members can use the images to quickly orient themselves in the data and make better decisions.

**Begin Data Processing Fast**

As soon as data is collected, it can be synchronized via Trimble AccessSync software. And as soon as the files have been updated, office staff can begin data processing, and client deliverables. Immediate processing of data enables projects to be completed more quickly.
Trimble Connected Community

Just as networked data has transformed other industries, Trimble Access software provides the surveying industry with the first comprehensive data collection solution that bridges the office and the field. Available to your team anywhere and at any time, all the files you need for a job can be securely shared via the Trimble Connected Community™ for immediate access by you and your team.

Trimble AccessSync software: Real-Time Data Synchronization

Trimble AccessSync™ software is your key to control the upload and download of your survey files. While connected, files synchronize, without delays or disruptions to your standard computing processes.

Trimble AccessSync software is an order of magnitude improvement over existing data transfer systems. Because it is integrated into the complete surveying solution, it puts an end to manual e-mail setup; slow, problematic uploads to FTP and error-prone dictation over the phone.

Data Security

With automated synchronization at the ready, you can be assured that your data is protected by a secure, redundant system. User-configured authentication ensures that only authorized parties can access your files. You can be confident that your files are safe with Trimble Access.
With Trimble Access software you are in control of every aspect of your surveying project: from data collection to final deliverable. Now you can master every detail of a project.

Trimble Access enables a new dynamic of team collaboration focused on achieving the same goals. Surprises encountered in the field are easily addressed with new instructions and new work files.

- Is the crew unable to access a jobsite? Upload the necessary files and instructions to start another job.
- Did the crew discover unexpected challenges while out in the field? They can upload images or data and send back for review.

The ability to review and assess progress in the field offers management control at every step. You can take corrective measures when necessary, and respond to issues as they arise. You will also streamline time-consuming post-fieldwork review and avoid unnecessary rework.

**New Streamlined Workflows**

For the first time, Trimble Access software offers streamlined workflows that guide crews through common project types such as road and tunnel surveys. These new workflows make data collection fast and simple. And they allow you to focus entirely on the deliverables not on the software commands for each task along the way.

The streamlined workflows do more than save you time. These new workflows also help to ensure that all teams collect and deliver data based on a single set of standard guidelines.
Trimble Access software offers field and office efficiencies to greatly improve your bottom line. Teams will finish jobs…both the data collection and the postprocessing…much faster than ever before.

**Win More Bids in More Applications**

With significantly lower costs and shorter timelines, your bids can be more competitive. With the flexibility of the streamlined workflows available, you can take better advantage of your team’s strengths. You will have more flexibility in the types of jobs you take on and the people available to bring them in under-budget.

The intuitive field user interface of Trimble Access makes even complex surveying tasks easy and efficient.

**Building on the Familiar**

Trimble Access software builds on the powerful performance of Trimble Survey Controller™ software, considered the industry standard by surveyors around the world.

The easy transition to Trimble Access provides constant benefit of data flow improvements and the option to explore any of the streamlined workflows available from Trimble.

MORE CONTROL BY YOU, 
MORE FREEDOM FOR YOU

Being connected throughout all phases of the surveying project lifecycle provides significant improvements to office and field efficiency. Trimble Access software is a field and office software solution that improves collaboration and control for surveying teams through constant connectivity – a first for the surveying community.

Constant Dataflow
Bringing the field and office closer together, Trimble Access software expedites data collection, processing, analysis and delivery for integrated surveying workflows. No matter where you are or what you are doing, you can always easily access the files you need with Trimble Access software.

Dedicated Workflows
With new streamlined workflows available, Trimble Access software enables field crews to stay focused on completing the job. New specialized applications are available to simplify common surveying tasks and shorten learning curves. Now it is even easier to introduce new capabilities to any surveying team.
